

This kit includes everything needed to connect to a 30A shore power service and charge a battery with 30A DC. This kit is ideal for empty shell vehicles without main panels, like skoolies and van conversions. The components allow for easily upgrading to more elaborate inverter/charger systems in the future.

**NOTICE:**

The "greyed out" battery bank with monitor as well as the shore inlet and AC outlet are not included, but you will be interacting with them.
